Education

California State University San Marcos

Bachelor of Science in Computer Science, GPA: 3.9

Jan 2025 – May 2026

San Marcos, California

Palomar Community College

Transfer Coursework in Computer Science

Aug 2021 – Dec 2024

San Marcos, California

Projects

Industry Partner Capstone Software Platform (NDA) | *Python, FastAPI, REST APIs, OAuth*

- Collaborating on a full-stack software platform with an external industry partner as part of a senior capstone project.
- Developing backend API endpoints using FastAPI to support authentication and platform integrations.
- Implemented OAuth 2.0 authorization workflows enabling secure third-party service connectivity.
- Designed scalable REST API interfaces enabling communication between frontend clients and external services.
- Working within a 5-person engineering team while following secure software development practices under NDA constraints.

Autonomous Firefighter Robot | *Embedded C, STM32 Nucleo, PWM, Sensors*

- Developed an autonomous robot capable of detecting and extinguishing flames using integrated sensor systems.
- Integrated ultrasonic, flame, and color sensors to enable obstacle avoidance, path following, and fire detection.
- Implemented real-time embedded control loops coordinating sensor inputs with motor actuation.
- Configured PWM motor drivers to control differential wheel movement and fan-based extinguishing system.
- Designed sensor-priority logic allowing flame detection to override navigation and obstacle avoidance behaviors.

Shop N' Track | *Java, Java Swing, MVC Architecture*

- Developed a Java desktop application that aggregates and compares product prices across multiple online stores.
- Implemented a modular MVC architecture separating business logic, UI components, and data management.
- Designed interactive Java Swing interfaces including authentication, product browsing, and profile management.
- Implemented product history tracking and graphical price visualization to analyze pricing trends.

Experience

Amazon

June 2022 – Present

Delivery Driver

Vista, CA

- Delivered 380+ packages daily while maintaining strict safety, efficiency, and delivery accuracy standards.
- Awarded the Amazon Front Runner Award for outstanding reliability and performance.
- Consistently ranked among top drivers for on-time delivery and customer satisfaction.

GenMark Automation

May 2025 – Aug 2025

Production Worker

Carlsbad, CA

- Prepared printed circuit boards (PCBs) for protective anti-water coating processes.
- Inspected materials before and after coating to ensure quality and process readiness.
- Verified coated components met process requirements before transfer to the next production stage.
- Supported manufacturing workflow contributing to the production of medical testing devices.

Del Taco

June 2019 – March 2022

Shift Manager

Vista, CA

- Promoted from Team Member to Shift Manager within one year based on strong performance and leadership.
- Supervised shift operations, trained employees, and ensured team productivity.
- Maintained compliance with food safety standards and operational procedures.

Technical Skills

Languages: Java, Python, C++, Embedded C

Backend / APIs: FastAPI, REST APIs, OAuth 2.0

Systems / Embedded: STM32, PWM Control, Sensor Integration, Real-Time Systems

Tools: Git, GitHub, Linux, IntelliJ, Visual Studio, VS Code, Empress

Concepts: Object-Oriented Programming, MVC Architecture, Software Design
